

# Intuitive Refrigerator

If we want to know the content, the only way is: opening the door.

Refrigerator has the single function: storage of food.

2. New Design

Add food scanner and food sensors within the current refrigerator.

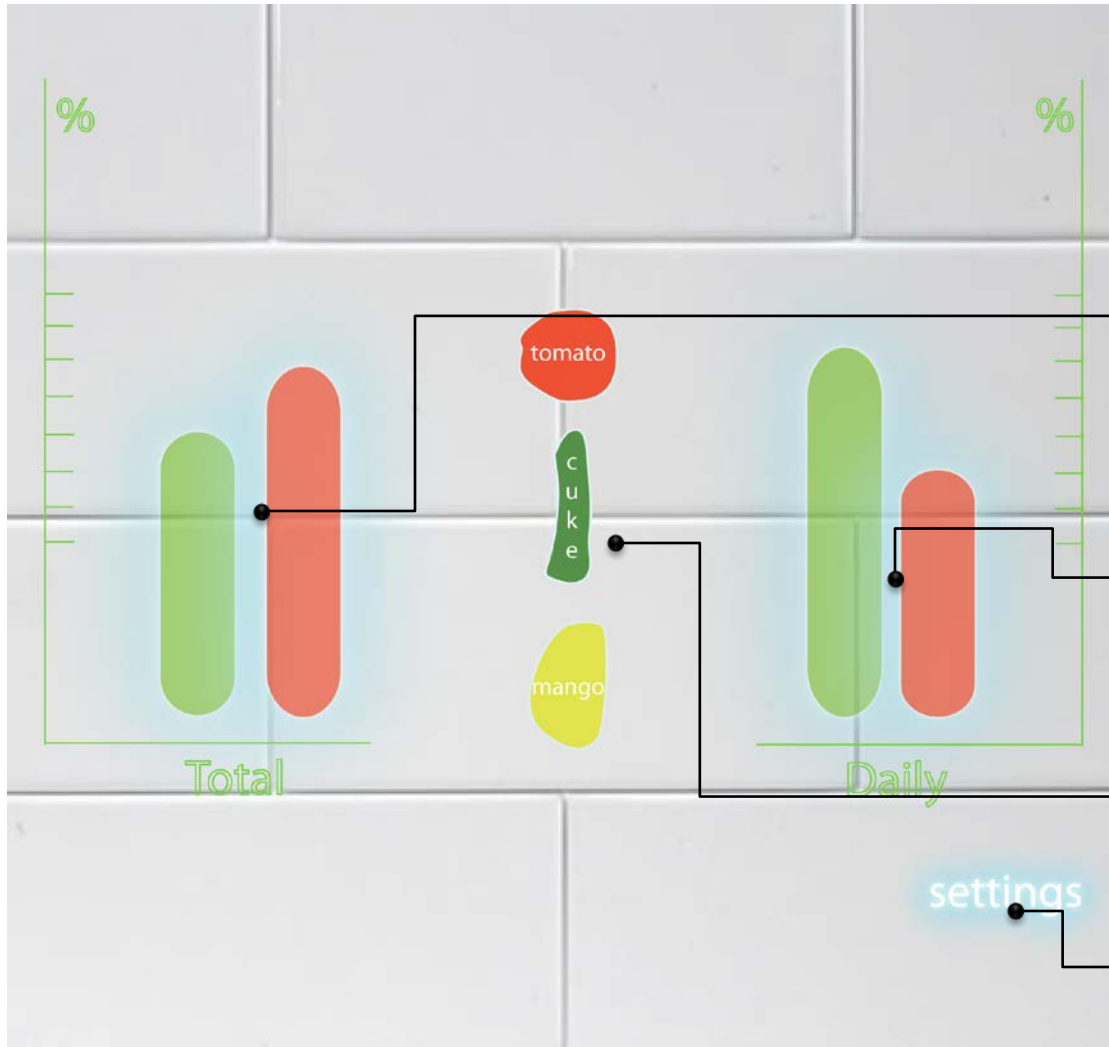

## How Does It Work?

The scanner can scan all the bar-code outside the food; the sensor can scan the food itself. All the information will together generate a statistical result.

## Intuitive Wall in Kitchen (or wherever)

Result of the overview of food in refrigerator:

: = healthy : unhealthy (total)

Result of the food consumed daily:

: = healthy : unhealthy (daily)

Food Recommendation according to the users' consumption and food plan.

Users can choose different food plans. Different plans will have different standards for the food scanning, calculation and food recommendation.

# Intuitive Refrigerator

Refrigerator working with the interactive wall can give a clear view of the nutrition composition. People may have a better understanding of food in the refrigerator.

People can choose different food plans, by which they can keep watch on their eating habits.

People can also gain food recommendations, in which way the refrigerator works as the nutrition expert.
